

AS Geography Summer Homework

The following tasks must be completed and submitted in your first geography lesson:

Task 1: Research a recent natural disaster caused by tectonic activity (earthquake or volcano, and any secondary impacts such as tsunami or landslide) and explain where it happened, why it occurred in that location and what consequences occurred for people. Include maps, diagrams and photos to show. Produce an account on at least 2 sides of A4.

Task 2: Using the internet or a library, research each of the following global challenges:

Global shift of manufacturing and services to Asia

Cultural diffusion

Environmental degradation

For each one, research:

- where they are occurring
- why they are occurring in these locations
- the challenges created and the effects these have

Task 2 should be presented as a poster/s or as a written assignment. Photos and maps should be included.

Overall you should spend about 3-4 hours completing these tasks.

Equipment You should also bring to your first lesson: pens, highlighters, A4 paper and an A4 ring folder for class notes.
