

STRATEGIC PRIORITY

ENVIRONMENT

To be committed to the promotion and delivery of sustainable practices that positively impact on climate change emergency, through organisational, staff and student understanding and participation, leading change through partnerships.

WE WILL ACHIEVE THIS BY:

Developing a clear and feasible path to climate change action through education and training, which embeds a social and economic responsibility, impacting positively on the Green Growth agenda.

Joining and committing to the Climate Action Roadmap for Further Education Colleges to combat climate change, creating a united ambition, and embedding change through education, knowledge and training for a sustainable future.

Developing a forum to deliver and achieve the 'Emerging Stage' of the Climate Action Further Education Roadmap, progressing to the 'Established Stage', and future planning for the 'Leading Stage' of the Roadmap.

Working towards a range of estate and infrastructure initiatives to reduce carbon neutral footprint, support the drive for a low carbon economy, invest in energy saving technologies, maximise recycling and minimise landfill.

Ensuring that green technology is incorporated and considered within curriculum planning, design, development and delivery – improving knowledge, understanding, and changing long-term behaviours of students and staff.
